Planning

Project overview

Create a solution that would allow to digitize the centuries old icon - receipt. Chexr would connect the merchants with banks, to allow seamless issuing for digital receipts as to the customer that would be shown in the bank's mobile app.

For merchants it can provide a possibility to know it's customers and push offers

Elevator pitch

Chexr will digitize the centuries old receipts by putting them in your phone straight after a purchase, get rid of paper receipts thus benefiting the environment.

No more lost receipts, rejected warranties, missed offers and all that while benefiting the environment. Join Chexr and get your purchases in your phone now.

Advantages

No more paper receipts

Physical and online purchase receipts in your wallet

Warranty one click away

Chexr will have the ability to track impressions and clicks on receipts.

Track the spending on your corporate cards

Obstacles

Implementation needed on Merchant side for POS

Identification, which customers are enrolled for digital receipt

API implementation on Bank side according to security standards

User persona - Chexr user

- Tech savvy - uses smartphone and new technologies
- PRO digitalization and innovation
- Environmentally responsible and productivity driven
- Uses card for most of purchases
- Users mobile banking app

Merchant - large company

- Wants to decrease costs
- Has internal IT team / vendor supporting current systems and POS
- Wants to implement new technologies to lead the market
- Does environmentally responsible business practices
- Introduce new loyalty program that reduces the cost of managing their own loyalty programs.

Merchant - small seller

- Interested in decreasing costs
- Has market pressure to digitize / implement new technologies like digital receipts
- Need support to implement API
- Wants to know analytics and push offers to customers

Banks

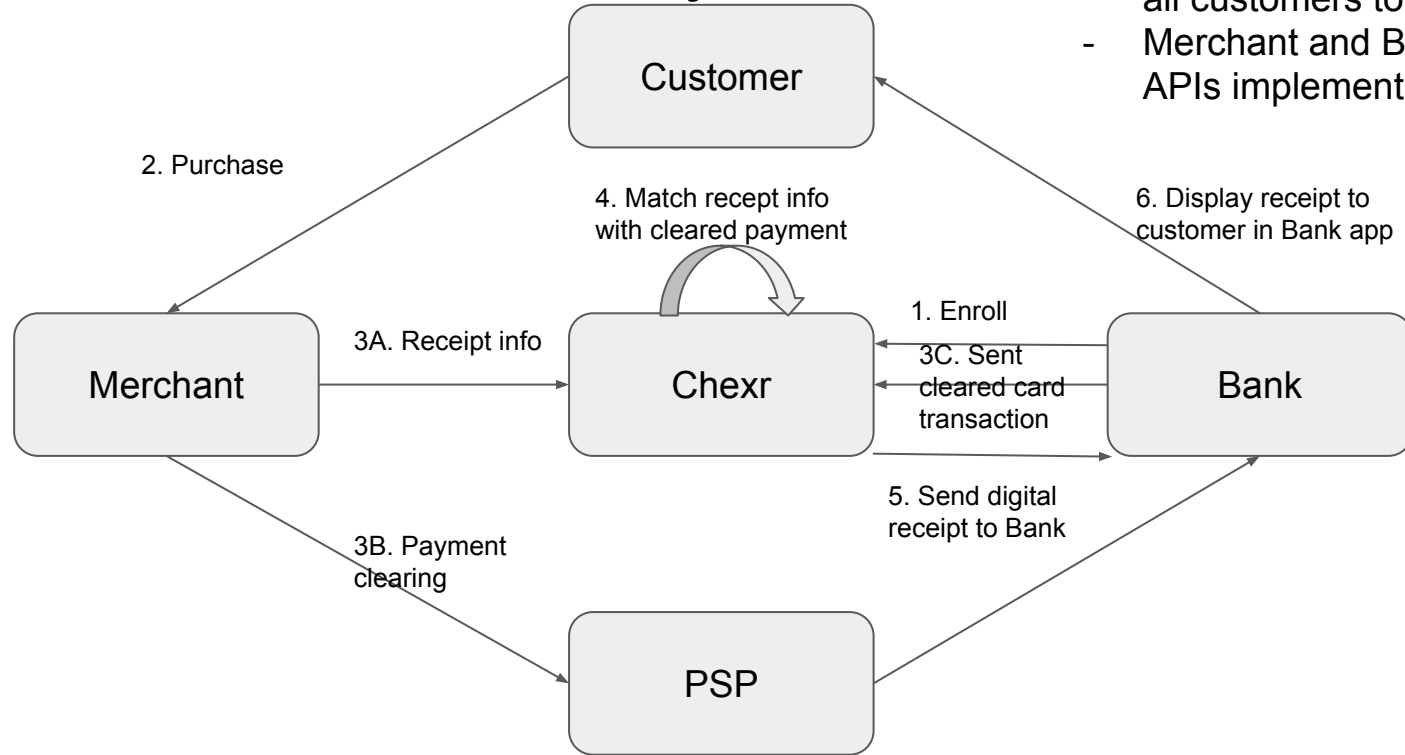

- Local Banks
- Lean in process / product implementations
- Wants to be local market leader in new technologies
- Banks will understand the budgeting habits of their customers

Product use scenarios

- Auto enrollment by bank
- Customer Enrollment
 - Payment in cash, Chexr as loyalty card
 - Merchants to push offers to customers
 - Card linked loyalty with the merchants (Small/Big)

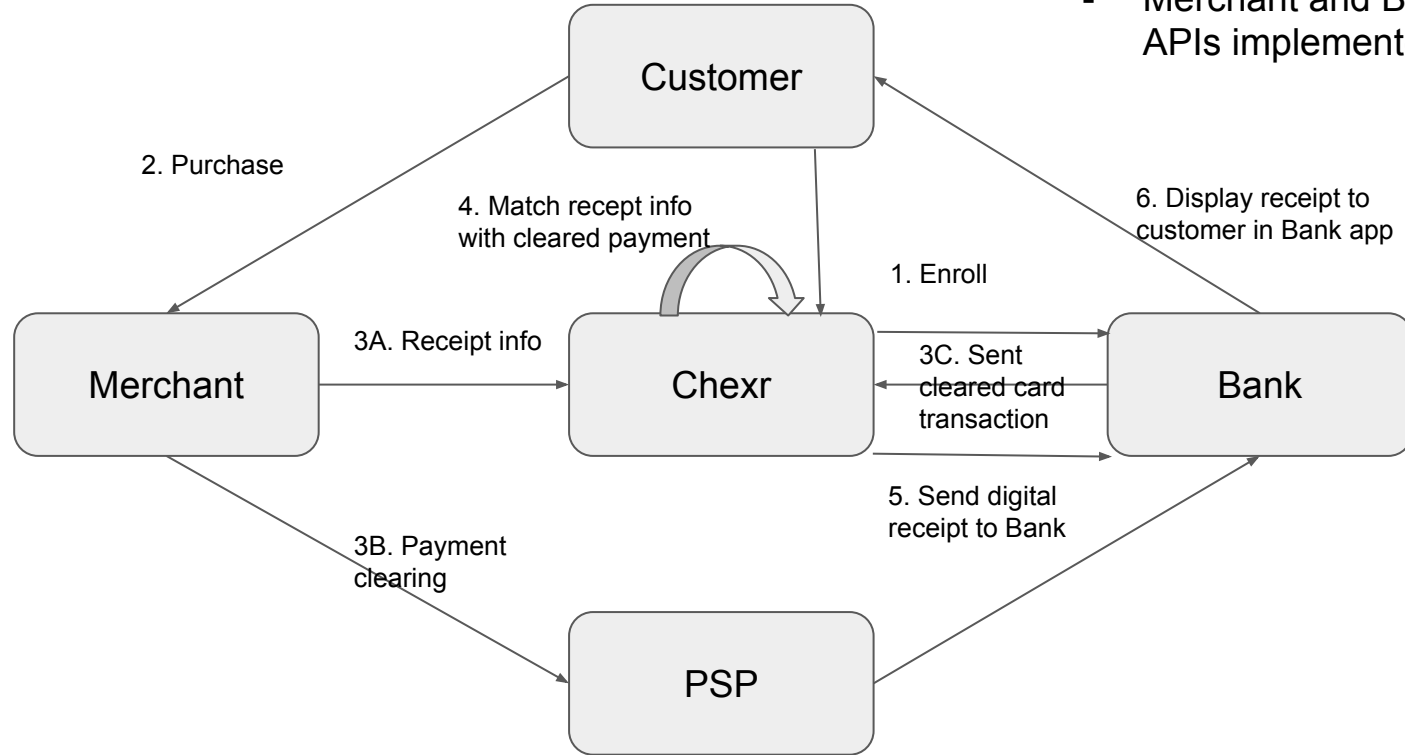

Data flows - auto enroll by bank

- Bank automatically enrolls all customers to Chexr
- Merchant and Bank has APIs implemented

Data flows - customer enrollment

- Customers enroll to Chexr
- Merchant and Bank has APIs implemented

Tech stack

- Python (or Node.JS) - FastAPI tool
- Swagger - RESTful API interface language
- Github - code repository (GitBook for API description)
- AWS EC2 (t2.micro) or \$9.50 a month
 - Amazon RDS - Database
 - Amazon S3 - storage
 - Amazon Cognito - access control
 - *limited tier 12 months free

Assumptions

- Cards only
- Integrations with Merchants and Banks
 - Merchant API and Bank API implementation
- One BackEnd developer to develop MVP within 2 months and write elaborate documentation of APIs
- Mobile app to be built with Expo.io for both Andriod and iOS

Thank you!
